14 The diagram shows four straight lines *ABC*, *CDE*, *AFD* and *BFE*.

Angle *CBF* = 65º
Angle *DFE* = 40º

Find the size of the angle marked *y*.
Give a reason for each stage of your working.

Angle ABF = 180° – 65° = 115°

Angles on the straight line ABC add to 180°.

Angle BFA = 40°

Vertically opposite angles at F are equal.

y = 180° – 115° – 40° = 25°

Angles in triangle ABF add to 180°.

1 mark
Find angles 115° and 40° using the stated lines.

3 marks total
25°, with all reasons linked to their angle statements.

25 °

(Total for Question 14 is 4 marks)
