16 120 students are asked if they study history or art.

78 of the students study history.
45 of the students that study history also study art.
53 of the students do **not** study art.

(a) Use this information to complete the frequency tree.

3 marks total
Enter 78 and 45 first.
Each branch total is the sum of its two leaves.

78 − 45 = 33; 53 − 33 = 20; 42 − 20 = 22. **(3)**

One of the students who studies art is chosen at random.

(b) Find the probability that this student does **not** study history.

Study art: 45 + 22 = 67

$\frac{22}{67}$

2 marks total
22 study art without history, out of the 67 art students.

$\frac{22}{67}$

(2)

(Total for Question 16 is 5 marks)
