27 The diagram shows a trapezium.
AB is the line of symmetry of the trapezium.

Work out the value of x and the value of y.

$5x - 24 = 2x + 33$

$3x = 57$

$x = 19$

Top angle $= 2 \times 19 + 33 = 71°$

$71° + (19 + 3y)° = 180°$

$3y = 90$, so $y = 30$

1 mark
Symmetry gives equal top angles.

2 marks total
Collect x terms and solve.

1 mark
Co-interior angles add to 180°.

1 mark
Substitute x before solving for y.

$x =$ 19

$y =$ 30

(Total for Question 27 is 5 marks)
