3 Lethna buys some boxes of pens and some packets of pencils.

There are 40 pens in each box.
There are 12 pencils in each packet.

Lethna gives one pen and one pencil to each student in Year 7 of her school.
When she has done this she has no pens left and no pencils left.

Work out how many boxes of pens and how many packets of pencils Lethna could have bought.

Multiples of 40: 40, 80, 120, 160, ...

Multiples of 12: 12, 24, 36, ..., 120, ...

Common total = 120 students

120 ÷ 40 = 3 boxes; 120 ÷ 12 = 10 packets

1 mark
Find a common total of pens and pencils.

2 marks total
Use 120, then divide by both pack sizes.

3 ..... boxes of pens

10 ..... packets of pencils

(Total for Question 3 is 3 marks)
