21 There are only black discs, white discs and yellow discs in a box.

The table shows the probability of picking at random a black disc.

Colour	black	white	yellow
Probability	0.55	0.30	0.15

The probability of picking a white disc is twice the probability of picking a yellow disc.

Complete the table.

White and yellow: 1 − 0.55 = 0.45

White : yellow = 2 : 1, so 3 equal parts

One part = 0.45 ÷ 3 = 0.15

Yellow = 0.15; white = 2 × 0.15 = 0.30

1 mark
Find the remaining probability.

2 marks total
Share it in the ratio 2 : 1.

(Total for Question 21 is 3 marks)
