DO NOT WRITE IN THIS AREA

12 Remi is asked to write down a two digit number using two different digits from 1, 2, 3, 4 and 5

He says,

"There are 25 ways of doing this because you need to multiply 5 by 5"

Remi is wrong.
Explain why.

After choosing the first digit, only 4 different digits remain.

There are 5 × 4 = 20 choices, not 5 × 5.

1 mark
The two digits must be different.

(Total for Question 12 is 1 mark)
