9 $1.67 \times 10^{-27} = k \times 9.11 \times 10^{-31}$

Work out the value of k.
Give your answer as an ordinary number correct to 3 significant figures.

$$\frac{1.67 \times 10^{-27}}{9.11 \times 10^{-31}} = k$$

$k = (1.67 \div 9.11) \times 10^{4} = 1833.150...$

1 mark
Divide coefficients and subtract the indices: −27 − (−31) = 4.

1 mark
Round to three significant figures; write an ordinary number.

$k =$ 1830

(Total for Question 9 is 2 marks)
