11 Sabina travels from London to Telford.

A ticket from London to Telford normally costs £65.25

Sabina gets $\frac{1}{3}$ off the cost of the ticket.

Amir travels by train from London to Coventry and then from Coventry to Telford.

The ticket from London to Coventry costs £23.75
The ticket from Coventry to Telford costs £14.95

Work out the difference between the cost of Sabina's journey and the cost of Amir's journey.

Amir: £23.75 + £14.95 = £38.70

1 mark
Add both tickets for Amir.

One third of £65.25 = £65.25 ÷ 3 = £21.75

1 mark
Find the discount.

Sabina pays £65.25 – £21.75 = £43.50

1 mark
Subtract the discount: she pays the other two thirds.

Difference = £43.50 – £38.70 = £4.80

1 mark
Compare the two final journey costs.

£ 4.80

(Total for Question 11 is 4 marks)
