15 The accurate scale drawing shows the positions of two ports, A and B.

Scale 1 cm represents 20 km

(a) (i) Find the bearing of port B from port A.

1 mark
Measure clockwise from north at A.

070 °

(1)

(ii) Find the bearing of port A from port B.

1 mark
Reverse bearing: 070° + 180° = 250°.

250 °

(1)

A boat is travelling in a straight line from port A to port B.

The boat has travelled $\frac{3}{4}$ of the distance from port A to port B.

(b) Work out the real distance the boat still needs to travel to get to port B.

AB measures 10 cm on the original page.

1 mark
Use the native scale.

Full distance = 10 × 20 = 200 km

1 mark
One quarter of the journey remains.

Distance left = 200 ÷ 4 = 50 km

50 km

(3)

1 mark
Use the remaining fraction, not the three quarters travelled.

(Total for Question 15 is 5 marks)
