21 The scatter graph shows information about the scores two judges gave eleven competitors in an ice skating competition.

For another competitor judge **A** gave a score of 4.6 and judge **B** gave a score of 3.8

(a) Show this information on the scatter graph.

1 mark
Plot (4.6, 3.8), using A on the horizontal axis.

(1)

(b) What type of correlation does the scatter graph show?

Positive

1 mark
Higher A scores tend to go with higher B scores.

(1)

For the next competitor judge **A** gave a score of 3.7

(c) Using the scatter graph, find an estimate for the score judge **B** will give this competitor.

At A = 3.7, B ≈ 3.2

3.2

2 marks total
Draw a best-fit line; read up from 3.7 and across to B.

(2)

(Total for Question 21 is 4 marks)
