12

RS and *ST* are 2 sides of a regular 12-sided polygon.
RT is a diagonal of the polygon.

Work out the size of angle *STR*.
You must show your working.

Exterior angle = 360° ÷ 12 = 30°.

Interior angle RST = 180° – 30° = 150°.

1 mark
Find the polygon's interior or exterior angle

RS = ST because the polygon is regular.

Triangle RST is isosceles, so its base angles are equal.

Angle STR = (180° – 150°) ÷ 2 = 15°.

1 mark
Share the remaining angle equally

1 mark
Correct angle

15 °

(Total for Question 12 is 3 marks)
