10 Jim thinks of a number.

$\frac{2}{3}$ of Jim's number is 48

Work out $\frac{5}{6}$ of Jim's number.

$\frac{2}{3} = \frac{4}{6}$, so 4 equal sixths represent 48.

Whole = 72

1 mark
One sixth = 48 ÷ 4 = 12

Five sixths:

5 × 12 = 60

1 mark
Correct requested fraction 60

(Total for Question 10 is 2 marks)
