**27** The accurate scale drawing shows the positions of port $P$ and a lighthouse $L$.

Scale: 1 cm represents 4 km.

Aleena sails her boat from port $P$ on a bearing of 070°

She sails for $1\frac{1}{2}$ hours at an average speed of 12 km/h to a port $Q$.

Find

(i) the distance, in km, of port $Q$ from lighthouse $L$,

(ii) the bearing of port $Q$ from lighthouse $L$.

PQ = 1½ × 12 = 18 km

On the scale, PQ = 18 ÷ 4 = 4.5 cm

QL ≈ 21.5 km; bearing from L ≈ 323°

**5 marks total**
Use 070° and 4.5 cm
Draw port Q
Measure QL and bearing
Approx. 22 km
Approx. 323°

distance $QL$ = ..... km

bearing of $Q$ from $L$ = ..... °

**(Total for Question 27 is 5 marks)**
