13 Sakira invested £3550 in a savings account for 3 years.

She was paid 2.6% per annum compound interest for each of the first 2 years.
She was paid R% interest for the third year.

Sakira had £3819.21 in her savings account at the end of the 3 years.

Work out the value of R.
Give your answer correct to 1 decimal place.

After two years: £3550 × 1.026^2 ≈ £3737.00.

Third-year factor = 3819.21 ÷ 3737.00

≈ 1.021999, so R ≈ 2.2%.

3 marks total
First year factor
Compound two years
R = 2.2%

.....

(Total for Question 13 is 3 marks)
