16 Marek has 9 cards.
There is a number on each card.

Marek takes at random two of the cards.
He works out the product of the numbers on the two cards.

Work out the probability that the product is an even number.

An odd product needs two odd cards.

There are 5 odd and 4 even cards.

P(both odd) = (5/9)(4/8) = 20/72.

P(even product) = 1 – 20/72

= 52/72 = 13/18.
