17

A and *B* are points on a circle with centre *O*.
CAD is the tangent to the circle at *A*.
BOD is a straight line.

Angle *ODA* = 32°

Work out the size of angle *CAB*.
You must show all your working.

Radius OA is perpendicular to tangent AD: 90°.

In AOD, angle AOD = 180° − 90° − 32° = 58°.

B,O,D are straight, so angle BOA = 122°.

OA = OB, giving angle OAB = (180° − 122°)/2 = 29°.

Angle CAB = 90° − 29° = 61°.

3 marks total
Tangent-radius 90°
Find angle OAB = 29°
Angle CAB = 61°
