24

Square $ABCD$ is transformed by a combined transformation of a reflection in the line $x = -1$ followed by a rotation.

Under the combined transformation, two vertices of the square $ABCD$ are invariant.

Describe fully one possible rotation.

Reflect in x = −1, then rotate 90° clockwise about (−1, 0). This fixes vertices B and D.

2 marks total

90° clockwise about (−1, 0)

(Total for Question 24 is 2 marks)
