1 (a) Expand and simplify $(x + 5)(x - 9)$

$(x + 5)(x - 9) = x^2 - 9x + 5x - 45$

$= x^2 - 4x - 45.$

2 marks total
Four products
Collect −4x, −45

(2)

(b) Factorise fully $9x^2 + 6x$

$9x^2 + 6x = 3x(3x + 2).$

Both terms share the full factor 3x.

2 marks total
Full factor 3x(3x+2)

(2)

(Total for Question 1 is 4 marks)
