18 x is proportional to $\sqrt{y}$ where $y > 0$

y is increased by 44%

Work out the percentage increase in x.

$x = k\sqrt{y}$, so x scales by $\sqrt{1.44} = 1.2$.

Increase = $(1.2 - 1) \times 100\% = 20\%$.

3 marks total
$x = k\sqrt{y}$
Multiplier $\sqrt{1.44} = 1.2$
20%

.....%

(Total for Question 18 is 3 marks)
