10 The graph shows information about the time, in minutes, a liquid has been cooling and the temperature of the liquid in °C.

(a) What is the temperature of the liquid at time 2 minutes?

At 2 minutes the curve is 80°C.

..... °C

1 mark
Read 80°C

(1)

Pam recorded the time when the liquid had a temperature of 50° C.

(b) Write down this time.

..... minutes

(1)

The curve reaches 50°C at 8 minutes.

1 mark
Read 8 minutes

Pam says that the temperature of the liquid drops more in the first 3 minutes of cooling than it does between time 9 minutes and time 12 minutes.

(c) Is Pam correct?
Give a reason for your answer.

Yes. In the first 3 min: about 100°C → 73°C (drop ≈27°C).

From 9 to 12 min: about 47°C → 40°C (drop ≈7°C).

1 mark
First drop is larger
