**17** The histogram gives information about the distances 80 competitors jumped in a long jump competition.

Calculate an estimate for the mean distance.

*Frequency = class width × density: 8, 20, 40, 12.*

*Midpoints: 6.8, 7.4, 7.8, 8.1 m.*

*Mean ≈ (8×6.8 + 20×7.4 + 40×7.8 + 12×8.1)/80*

*= 611.6/80 = 7.645 m.*

**4 marks total**
At least one frequency
All frequencies
Weighted midpoint sum
7.645 m

..... m

**(Total for Question 17 is 4 marks)**
