12 There are two drama groups in a school.

In one group there are 36 boys and 48 girls.

In the other group, $\frac{3}{7}$ of the students are boys and the rest of the students are girls.

Ann says,

"The ratio of the number of boys to the number of girls is the same for both groups."

Is Ann correct?
You must show how you get your answer.

First group: boys:girls = 36:48 = 3:4.

Second group: boys = 3/7, girls = 4/7, so 3:4.

Yes, Ann is correct: the ratios match.

3 marks total
36:48 = 3:4
3/7 : 4/7 = 3:4
Yes

(Total for Question 12 is 3 marks)
