10 The diagram shows a shape made from 6 identical squares.

The total area of the shape is 5406 cm^2

(a) Find an estimate for the length of one side of each square.
Give your answer correct to the nearest whole number.

Area of one square = 5406 ÷ 6 = 901 cm^2

For an estimate, 901 ≈ 900 = 30^2

Side ≈ √900 = 30 cm

1 mark
divide area by 6

square-root estimate

1 mark
30 cm

30 cm

(3)

(b) Is your answer to part (a) an underestimate or an overestimate?
You must give a reason for your answer.

Underestimate: I rounded 901 down to 900,
so √900 = 30 is less than √901.

(1)

1 mark
rounding down makes estimate low

(Total for Question 10 is 4 marks)
