12 Expand and simplify $(x - 2)(3x + 2)(2x + 3)$

$(x - 2)(3x + 2) = 3x^2 - 4x - 4$

$(3x^2 - 4x - 4)(2x + 3)$

$= 6x^3 + 9x^2 - 8x^2 - 12x - 8x - 12$

$= 6x^3 + x^2 - 20x - 12$

1 mark
expand first two brackets

1 mark
multiply third bracket

1 mark
simplify correctly

$6x^3 + x^2 - 20x - 12$

(Total for Question 12 is 3 marks)
