17 (a) Expand $y(y + 5)$

$y(y + 5) = y^2 + 5y.$

1 mark
$y^2 + 5y$

.....

(1)

(b) Factorise $4a - 6$

$4a - 6 = 2(2a - 3).$

1 mark
$2(2a - 3)$

.....

(1)

(c) Solve $2(5x - 4) = 21$

$2(5x - 4) = 21$

$10x - 8 = 21;\ 10x = 29$

$x = 29/10 = 2.9.$

3 marks total
Expand brackets
Isolate x
x = 2.9

$x =$ .....

(3)

(d) Simplify $4e^2f \times 5ef^3$

$4e^2f \times 5ef^3$: coefficients $4 \times 5 = 20$; powers $2+1$ and $1+3$.

$= 20e^3f^4.$

2 marks total
Multiply coefficients
Add powers

.....

(2)

(Total for Question 17 is 7 marks)
