26 In a bag there are only red counters, blue counters, green counters and pink counters. A counter is going to be taken at random from the bag.

The table shows the probabilities of taking a red counter or a blue counter.

Colour	red	blue	green	pink
Probability	0.05	0.15	0.5	0.3

The probability of taking a green counter is 0.2 more than the probability of taking a pink counter.

(a) Complete the table.

Green + pink = 1 − 0.05 − 0.15 = 0.8.

Let pink = p; green = $p + 0.2$.

$2p + 0.2 = 0.8$; $p = 0.3$, green = 0.5.

2 marks total
Remaining 0.8
Green 0.5, pink 0.3

(2)

There are 18 blue counters in the bag.

(b) Work out the total number of counters in the bag.

Blue is 0.15 of total, so total = 18 ÷ 0.15 = 120.

2 marks total
Divide by 0.15
120 counters

(2)

(Total for Question 26 is 4 marks)
