5 The first four terms of a Fibonacci sequence are

a $\quad$ $2a$ $\quad$ $3a$ $\quad$ $5a$

The sum of the first five terms of this sequence is 228

Work out the value of a.

Fifth term = 3a + 5a = 8a

a + 2a + 3a + 5a + 8a = 19a

19a = 228, so a = 12

1 mark
fifth term 8a

1 mark
sum is 19a

1 mark
a = 12

12

(Total for Question 5 is 3 marks)
