6		Correct conclusion from correct working	M1	for a method to find the interior angle, e.g. $(8 – 2) \times 180 \div 8$ (= 135) or exterior angle, e.g. $360 \div 8$ (= 45) of a regular octagon
			A1	for interior angle = 135 or exterior angle = 45
			M1	for method to find size of angle *CDA*, eg $(360 - 135 \times 2)/2$ (= 45) or for stating and using *BC* parallel to *AD*
			C1	for method to complete the solution with angle *CDJ* = 135 e.g. 180 − "45" (= 135) or angle *BCD* and angle *CDJ* are alternate angles
