16	(a)		Shown	M1	for method to establish at least one root in (2, 3), e.g. f(x) = $x^3 - 3x^2 + 3$, f(2) (= −1), f(3) (= 3) oe
				A1	for supportive explanation e.g. "since there is a change in sign there must be at least one root in $2 < x < 3$ (as f is continuous)" oe
	(b)		Shown	C1	for at least $x^3 = 3x^2 - 3$ and no incorrect steps.
	(c)		2.153	M1	for $x_1 = \sqrt[3]{3 \times 2^2 - 3}$
				A1	for $x_1 = 2.080(\ldots)$
				A1	for $x_2 = 2.153(\ldots)$
