15 (a)		$19.0\dot{6}$	M1 A1	for 7.84 **or** 12.2 **or** 1.38 for 19.066 (66666…) or 19.06 with some indication that the 6 is recurring
(b)		19.1	B1	ft from part (a) providing to at least 2 decimal places

Documented scheme clarification

1MA1_MOCK_SET_03_3F_Q15

Original source

scheme page 10, SHA256 74c8f7bd438e4ea6f63a49ca02fe8926e33cf7db0b10075a09c76cbe075d7efc

Original wording

The source method-mark examples include intermediate values 7.84 and 12.2.

Correction / interpretation

The printed expression uses 2.8 cubed: 2.8^3 = 21.952, the numerator is 26.312 and the denominator is 1.38. The value is 19.066666... and rounds to 19.1 at one decimal place. The scheme intermediate examples 7.84 and 12.2 correspond to squaring 2.8 and are inconsistent with this question; its final answer is correct.

Reason

Read the source superscript and independently evaluate the exact expression.
