17		19 or 20	M1	for correct method to find the quantity in 2017, e.g. 0.87 × 30 (= 26.1)
			M1	(dep) for complete iterative process, e.g. (quantity in 2018 =) 0.87 × “26.1” (= 22.707), (quantity in 2019 =) 0.87 × “22.707” (= 19.75509)
			A1	for answer of 19.75509 correctly rounded or truncated to the nearest whole number

Documented scheme clarification

Original wording

The scheme accepts 19 or 20 and allows truncation.

Correction / interpretation

The calculated quantity is 30 x 0.87^3 = 19.75509 g. The question requests the nearest gram, which is 20 g. The original scheme also accepts the truncated answer 19 g; that broader marking allowance is retained explicitly rather than described as ordinary rounding.

Reason

Three yearly steps run from the start of 2016 to the start of 2019.
