14 (a)	$3\frac{3}{11}$	P1	for working out the time using algebraic expressions, eg $\frac{x}{4}+\frac{2x}{3}$ $(=\frac{11x}{12})$	Process marks can be awarded for work in minutes or in hours
		P1	for working out the average speed eg $(x+2x)\div\frac{"11x"}{12}$	
		P1	for simplifying eg $\frac{3x\times12}{11x}$	
		A1	cao	

(b)	1	P1 P1 P1 A1	for forming an expression for a time, eg $\frac{x}{4}+\frac{25}{60}$ oe or $\frac{2x}{3}-\frac{25}{60}$ oe for forming an equation eg $\frac{x}{4}+\frac{25}{60}=\frac{2x}{3}$ starts process to solve the equation eg isolates terms in x, eg $\frac{2x}{3}-\frac{x}{4}=\frac{25}{60}$ **or** deals with fractions eg, multiplies by 60 throughout cao	Units used must be consistent.
