

Paper: 1MA1/2H				
Question	Answer	Mark	Mark scheme	Additional guidance
15 (a)	$5n^2 + 2n - 4$	M1	for a correct start to a method to find the n th term, eg constant 2nd differences and n^2 OR states $2a = 10$ or $3a + b = 17$	Need to see constant 2nd difference found and n^2 Condone use of a different variable throughout $a = 5$ or $b = 2$ implies M1
		M1	for working with $5n^2$, eg $5n^2$, and sequence $-2, 0, 2, \dots$ OR states $2a = 10$ and $3a + b = 17$	$5n^2 + 2n$ implies M2 $5n^2$ is implied by $5, 20, 45, \dots$ $a = 5$ and $b = 2$ implies M2
		A1	for $5n^2 + 2n - 4$ oe	Condone $+ - 4$
	1.2	M1	for substituting values, eg $4 = k \times 9 + k$ or $4 = k(9 + 1)$ or $(k = 0.4)$	
		M1	for $(u_3 =)$ “0.4” $\times 4 +$ “0.4” $(= 2)$	
(b)		A1	for 1.2 oe
