

17	1610	M1	for splitting the area into strips and correct process to find the area of one strip, eg $\frac{10 \times 12}{2} (=60)$ or $\frac{(12 + 30)}{2} \times 10 (=210)$ or $\frac{(30 + 60)}{2} \times 10 (=450)$ or $\frac{(60 + 118)}{2} \times 10 (= 890)$	Strips may be rectangular
		M1	for complete process using at least 4 strips to find the area under the curve, eg “60” + “210” + “450” + “890” (= 1610)	Allow one error in the reading of speeds
		A1	for answer in the range 1605 to 1615 from correct working using at least 4 strips
