28 The equation of a straight line **L** is $y = 3 - 4x$

(i) Write down the gradient of **L**.

In y = 3 – 4x, the x coefficient is –4.

1 mark
Gradient –4

.....

(1)

(ii) Write down the coordinates of the point where **L** crosses the y-axis.

At the y-axis x = 0, so y = 3 – 4(0) = 3.

1 mark
Intercept (0,3)

(..... , ...)

(1)

(Total for Question 28 is 2 marks)

TOTAL FOR PAPER IS 80 MARKS
